ESTONN STARSHIP ALLIANCE

1. Introduction

ESTONN is a Token based on ERC-20 issued by ESTONN STARSHIP ALLIANCE that is an organization within the Star Citizen game.

2. Purpose

ESTONN is used to find an efficient way of managing costs, decision making and operating the organization. And the goal is to become a connecting medium when players get help and support, or help others, so that more people can play the Star Citizen game and have a new experience in the game.

3. Token Distribution

Tokens is distributed according to the contribution of player to alliance. For example, if you participate in a policy or event, such as training, combat, or rescue, the alliance will distribute the token, and each distribution method will be posted(notified) in a separate document.

All policies and events operated by the organization are rewarded with tokens. This means that the player in the organization is not forced to unconditional sacrifice. This makes it important for organizations to maintain a political and economic relationship with the player or organization that owns the token. If the tokens are exhausted, the organization will have political and economic trouble, so the organization will endeavor to distribute the tokens and to collect the tokens continuously.

4. Token Classification

4.1 Freeze : 50,000,000 (50%)
Freeze for token stability.

4.2 Alliance Reward : 20,000,000 (20%)
The first token to be distributed. It will be distributed before the official release of the game, and will be reward for the organization's publicity and most basic mission. The tokens thus distributed will be the basis of the organization's economic system.

### 4.3 Organization Operating : 10,000,000 (10%)
This is a token used when the game is officially released and the 'Alliance Reward' token is exhausted. Used to implement more sophisticated organization operating and policies. (Freeze until official release)

4.4 Development : 10,000,000 (10%)
Development fund is used to develop an organization's operating system. If the funds remain, this funds will be frozen until the 'Organization Operating' Token is exhausted.

4.5 Founder : 10,000,000 (10%)
Token assigned to the founder individual. The founder can use it as he/she wishes, and as the value of the token increases, it becomes the driving force of the organization's operation.

TOKEN CLASSIFICATION

Founder 10%
Development 10%
Organization Operating 10%
Alliance Reward 20%
Freeze 50%

5. Token Process

5.1 Request

Tokens can be paid or reimbursed for all kinds of requests, such as rescue, escort, transport, rental, exchange of resources.

5.2 Voting

Tokens are paid as members of the organization contribute to the organization and can participate in the operation or decision making of the organization. The more tokens you have, the more you can influence decisions, but the tokens used in voting are not refundable, Therefore, it is not easy to use all tokens.

5.3 Identification

Depending on the number of tokens held, the class within the organization is determined. Therefore, the address of the wallet holding the token will soon reveal his or her identity. The player's name, gender, and age are not important in the game. Only the game ID and number of tokens are important.

5.4 Trust Building

Trading/exchanging within a game is very difficult to build trust. Therefore, in order to build trust among players who hold tokens and want to trade, the organization will operate a token based 'Reputation' system and 'Wanted' system.

5.5 Membership Level

The player participates in an organization's policies, events, and interactions between members and receives tokens. So the membership level in the game is determined by the amount of tokens the player has. The higher class, the more privileged you will have in your organization.

6. Value of Token

Since ESTONN is a token without ICO, basically the price of the token is 0.00 USD. However, it is convenient to have a certain level of value in order to use to various requests and exchange of resources. So the value of the initial token(not price) is set to 1.00 ESTONN $\geqq$ 1.00 USD, which varies according to the supply and demand between the organization that holds the token and its members.

NOTICE

* ESTONN is token based on Blockchain(ERC-20), so it can be connected on/offline. So if you have a hardware(USB) wallet, you can move the token to USB and carry that USB. In other words, regardless of the game update and various in game penalties, you can own, transfer, and keep your assets by ESTONN token.

* ESTONN tokens deployed based on ERC-20 can be owned and exchanged forever, as long as the Ethereum is mined regardless of whether the game is terminated or the organization in-game is operated.

* The token distributed is owned by each individual. Therefore, ESTONN STARSHIP ALLIANCE assumes no responsibility or liability for how the tokens distributed are used. (Loss, wrong transfer, usage, etc.)

* Once a token is created and distributed, ESTONN STARSHIP ALLIANCE cannot impose any controls or restrictions except on the tokens held by the founder and the organization.

APPENDIX

TOKEN INFORMATION

Name	:	ESTONN
Symbol	:	ESTN
Decimals	:	18
Contract Address	:	0x997080B8EE7d75FBA23F3EC794dF99Da646c87EC
Quantity	:	100,000,000 ESTN
Technical Standard	:	ERC-20

FOUNDER INFORMATION

Community Moniker	:	ESTONN
Handle ID	:	quinnchoi
Referral Code	:	STAR-7VCT-67NK
